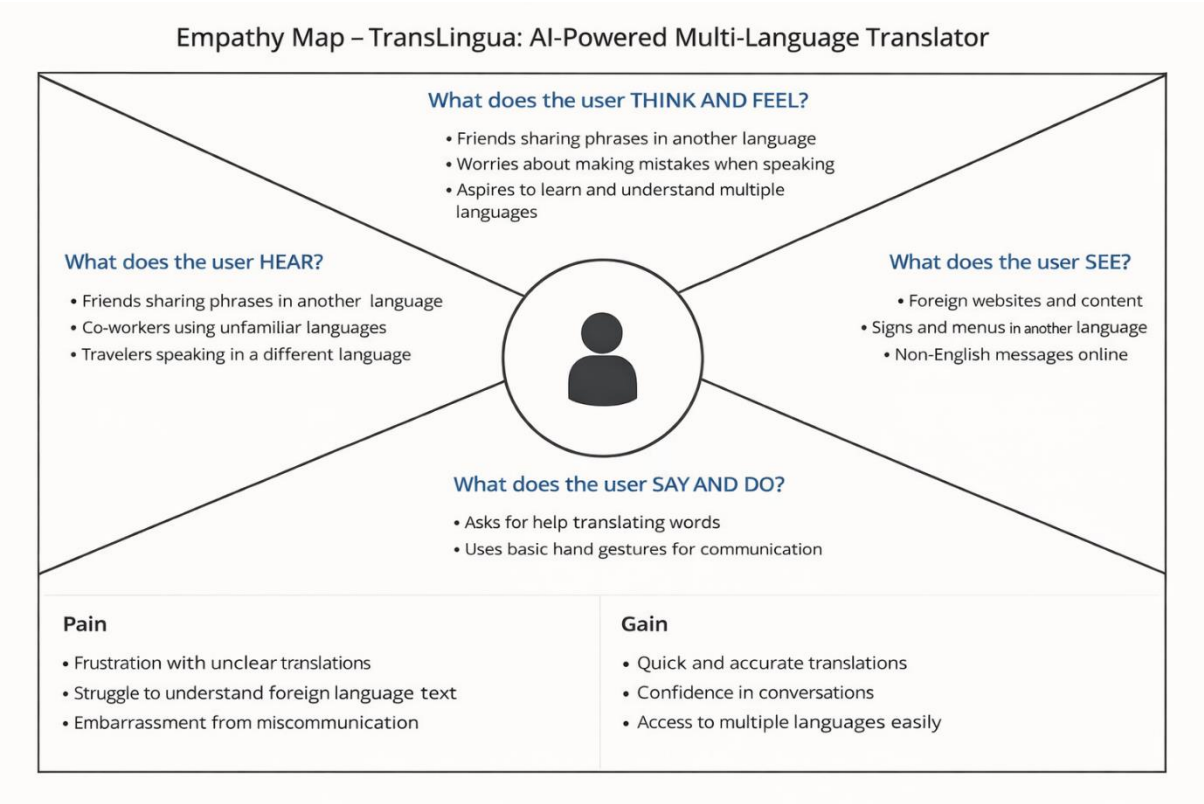
Project Name	AI-Powered Multi-Language Translator using Gemini
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple and easy-to-understand visual tool that captures insights about users' behaviors, needs, and attitudes while using the **TransLingua: AI-Powered Multi-Language Translator**. It helps the team understand how users interact with the application and the challenges they face due to language barriers.

It is a useful method that enables the team to better understand users and design solutions that improve communication and translation experiences. Creating an effective solution requires understanding the real problem and the people experiencing it. Developing the empathy map allows the team to view the system from the user's perspective, including their goals, expectations, and difficulties when translating languages.


Example:
